

NOEL PAUL MOSES JANGAM

San Jose, California • 480-953-4826 • jangannoelpaulmoses@gmail.com • [Linkedin](#)

SUMMARY

Full Stack Software Engineer with 6+ years of hands-on full-stack development experience, including over 4 years of industry experience spanning fast-paced startups to a \$140B+ market cap enterprise. Proven expertise in building scalable, cloud-native applications across the stack using modern technologies such as **TypeScript, Python, ReactJS, NodeJS**, and **AWS**. Passionate about integrating **AI/ML** capabilities using tools like **LangChain, OpenAI**, and **Hugging Face** to enhance product intelligence and user experience. Strong track record in developing robust backend systems and writing clean, maintainable code. Adept at collaborating with clients to understand business needs, configure software solutions, optimize performance, and ensure long-term success.

TECHNICAL SKILLS

- **Languages:** Java, Python, C++, JavaScript, TypeScript, HTML/CSS.
- **Frameworks/ Libraries:** ReactJS, NodeJS, NextJS, ExpressJS, React Native, Streamlit
- **Cloud Platforms:** Amazon Web Services (AWS: Lambda, ECS, S3, SQS, SNS, DynamoDB, CloudWatch, Cloudfront), GCP Cloud Run.
- **Operating Systems:** Linux, MacOS, Windows.
- **Databases:** SQL (MySQL, SQLite, PostgreSQL, Oracle), NoSQL (MongoDB, Amazon DynamoDB).
- **Development/ AI Tools:** Git, GitHub Actions, Docker/Kubernetes, Vercel, Render, Hostinger, LangChain, n8n, BoltAI, LovableAI, Gemini, OpenAI API, Hugging Face, AutoGen, FAISS

EDUCATION

Master of Science - Computer Science (GPA: 3.83/4.0)

May 2025

Arizona State University, Tempe, AZ

PROFESSIONAL EXPERIENCE

Founding Full Stack Engineer, Naviget, San Jose, CA

February 2025 - Present

- Built Naviget's cloud-based medical imaging full-stack application, enabling real-time, HIPAA-compliant rendering of 2D MRIs and CT scans into visualized 3D models using **AWS, ReactJS, Supabase, and PostgreSQL** for scalable, secure processing.
- Developed a resilient DICOM file upload system using **AWS S3, Lambda, ECS** handling 500+ image uploads daily with robust error handling and encryption.
- Engineered an AI-powered video slider tool for dynamic, real-time before-and-after MRI scan comparisons using **NextJS, Typescript**, and **Python-based Lambda APIs**, enhancing diagnostic accuracy and improving user interaction.
- Reduced AWS costs by 80% by migrating long-running **DICOM** processing workflows from **AWS Lambda** to **ECS** using **Docker**, optimizing for sustained workloads and minimizing per-invocation billing overhead.
- Led backend dashboard integration with **PostgreSQL**, writing optimized SQL queries, schema migrations, and managing relational data for real-time imaging metadata.
- Contributed Naviget's official acceptance into the **NVIDIA Inception Program**, leveraging CUDA-powered processing and accelerated computing to drive new advances in DICOM workflows and next-generation imaging platforms.
- Designed and automated **CI/CD** workflows with GitHub Actions, integrating performance benchmarking and rollback strategies, resulting in 10+ successful deployments per month with zero critical post-deployment issues.
- Automated system notifications with **AWS SNS and SQS**, and integrated Microsoft Teams for real-time incident response.

Software Engineer Intern, RoomieHub, Phoenix, AZ

June 2024 - November 2024

- Designed and implemented 4 intuitive navigation components for the User Profile dashboard in the mobile application using **React Navigation**.
- Led development of 2 primary modules: User Profile Navigation and Progress Tracking using **React Native, AWS**, and **Redux**.
- Deployed User Profile module on **AWS EC2** ensuring 99.9% uptime and efficient resource utilization for the backend.
- Developed home screen functionality, supporting image uploads up to 10 MB and enhanced **state management** using **Redux**.

Software Engineer, Tata Consultancy Services (Client: AWS), Hyderabad, India

October 2021 - July 2023

- Developed and deployed **Java-based Lambda functions** for data ingestion pipelines handling thousands of documents daily using AWS Textract and S3.
- Led the migration of a monolithic **Java** service to a **modular, containerized architecture**, improving deployment flexibility and fault isolation.
- Contributed to **Amazon CodeWhisperer**, a Low-Code/No-Code developer productivity platform.
- Developed **25+ AWS APIs** and respective backend services leveraging **Java**.
- Produced **SNS** with **AWS SQS & Lambda** managing over 400 notifications daily.
- Collaborated with **cross-functional** teams at Amazon to design and implement resilient **Java** backend services, enhancing internal developer tools and streamlining API integration workflows, leading to faster and efficient development cycles.

Software Engineer Intern, Verzeo, Hyderabad, India

June 2019 - November 2019

- Developed a comprehensive **AWS hosted** E-commerce solution, leveraging **AWS Elastic Beanstalk and Cloudfront** to improve page load times and data-processing efficiency by 25%.
- Designed and implemented core system functionalities, including user authentication, product catalog management, and order processing.
- Collaborated extensively with experienced engineers to identify and resolve technical problems, and improved code to enhance performance and scalability.

PROJECTS

[ApplyBeast.com](#), Tech Stack: TypeScript, NextJS, NodeJS, PostgreSQL, REST API, SendGrid, Google OAuth

- Built a full-stack SaaS platform and published a **Chrome Extension** that automates LinkedIn job applications that has helped users apply to over **3,000 roles** with AI-powered resume feedback.
- Integrated **Lemon Squeezy** for secure subscription billing with Razorpay support, and **SendGrid** for transactional, welcome and promotional emails.
- Successfully deployed ApplyBeast's infrastructure on Vercel and AWS, including its dashboard on Vercel, with CI/CD workflows enabling seamless updates and rollbacks.

[NoelPaulMoses.com](#), Tech Stack: JavaScript, ReactJS, ThreeJS, Vite, EmailJS

- Built a personal portfolio website with special focus on dynamic and responsive UI components using **JavaScript** and **ReactJS**.
- Specialized in integrating 3D models using **ThreeJS** into the website and auto deployed on **Hostinger** via **Github**.

LinkedIn Scraper, Tech Stack: Python, Selenium, DataKund, CSV, hashlib

- Developed an automated scraping tool using **Selenium** and **DataKund** (kund package) to extract comments and metadata from public LinkedIn posts.
- Collected and processed structured data from over **15,000 active job seekers**, enabling meaningful behavioral insights and engagement analytics.
- Implemented **batch-wise comment extraction and incremental CSV writes**, ensuring memory efficiency and resilience to interruptions or crashes.
- Integrated **Google Maps API** to send location with SOS alert while ensuring 10-meter accuracy when triggered.

GenAI Based Insight Generator, Tech Stack: Python, LangChain, OpenAI, AutoGen, FAISS

- Utilized **FAISS Vector DB** for efficient storage, tokenization, and connected **GPT-4o** as the backend **LLM** (Large Language Model).
- Constructed a sophisticated **Multi-Agent Architecture** using Microsoft's **AutoGen** framework, incorporating Document Reader, Analyst, and Manager Agents to hierarchically read CSV files, communicate, and generate comprehensive insights and predictions.
